

What to do during a Power Outage?

GET FLASHLIGHTS

- Flash lights and battery operated lights are safe and easy to use
 - Do NOT use anything gas related as they are harder to control in darkness
-

AVOID DOWN POWER LINES

- Power lines can still be live even if not sparking
 - Be aware a power line may energize nearby items too
-

KEEP APPLIANCES CLOSED

- Fridges and Freezers can keep things cool for 2 days even with no power
-
